

BIODERM[®]

BIODERM[®] METHODOLOGY

BIODERM® METHODOLOGY

Discover a scientifically supported daily hygiene routine for those with the most fragile skin that helps avoid common skin issues and increases wellbeing

The BIODERM METHODOLOGY® is a scientifically supported daily hygiene routine that uses the 4 BASIC PRODUCTS of the BIODERM Isodermica Dermatological Line (Timo Plus – Total gen - Shampoo Soft – Pasta Barriera). These innovative products are the result of the extensive testing of over 200 different formulas based on active natural extracts. The proper application of these Bioderm Methodology helps achieve primary fragile skincare objectives, such as:

-
- ✓ Effective cleaning
 - ✓ Hydration of dry skin
 - ✓ Extra protection during the day
 - ✓ Delicate care for the most fragile skin

Tested effectiveness in more than 2,000 Nursing home facilities:

- ✓ Win time: thanks to more effective cleaning results and no more hygiene-related complications
- ✓ Reduce costs: as no complication-related healing products, such as moisturizers, emollients, soothing, decongestants, anti-itching, anti-odorants are needed
- ✓ Increase patient well-being: patients experience an overall higher degree of comfort as dermatological pathologies and complications are avoided
- ✓ Increase personnel satisfaction: health care professionals celebrate the simplicity and effectiveness of the Bioderm Methodology, making their job easier and their patients happier

The BIODERM APPLICATION METHODOLOGY® is adopted by health facilities as a "Protocol for Personal Hygiene of the Guest".

FARMODERM collaborates with the Managers of the Nursing home facilities for the drafting of this Protocol, elaborating it and customizing it according to specific needs.

FARMODERM also organizes "Training Meetings" to which all the Health Professionals are invited, during which the issues related to the hygiene and dermatological care of residents are discussed and the correct application of the BIODERM® APPLICATION METHODOLOGY is illustrated in order to guarantee maximum personal well-being to the Resident and to ensure maximum economic savings to the Nursing home facilities.

USED IN MORE THAN 2,000 FACILITIES

APPROVED BY RESIDENTS AND PROFESSIONALS

PERSONAL HYGIENE

Daily hygiene and proper skincare are a fundamental right of every patient.

In the case of incontinence (urinary – faecal – mixed), the right daily hygiene procedure becomes fundamental to prevent not only bad odours, but also skin complications such as irritation, redness, maceration and lesions of the perineal skin (IAD – Incontinence Associated Dermatitis) which can cause pain, a burning sensation, and/or itching. Moreover, once the skin is damaged, the bacteria may penetrate the skin causing even more serious complications.

Particular attention, therefore, should be paid to the choice of detergent. Besides superior cleaning it should also minimize the risk of allergies (isodermica) and rebalance the correct pH of the skin according to its needs (self-balancing pH).

plus

CLEANSING EMULSION WITH PREVENTIVE ACTION

Ideal for intimate and whole-body hygiene

In addition to a superior and natural daily cleansing:

- ✓ Helps prevent irritation
- ✓ It performs a beneficial **decongestant** action
- ✓ Promotes the restoration of different **altered pH**
- ✓ Reconstitutes the **skin's natural protective barriers**

BM 3932	A902406420	500 ML
BM 3933	A902967102	1000 ML

total gen

CLEANSING & PROTECTIVE FLUID CREAM

High moisturizing, emollient, sebo-restitutive activity

Thanks to the presence of oils and plant extracts with antifungal and antibacterial activity (tea tree oil and thyme) it is recommended:

- ✓ For delicate physiological hygiene of very **fragile skin, incontinent or trained patients**
- ✓ In all cases where washing with water and traditional liquid detergents is not recommended

BM 3916	A938562511	500 ML
BM 3914	A938562485	1000 ML

SHAMPOO SOFT

GENTLE SHAMPOO FOR FREQUENT WASHING
with active natural extracts

Suitable for any type of hair, in compliance with the natural protective defences of the scalp:

- ✓ Helps counteract **dandruff formation process** and **hair loss**
- ✓ **Revitalizes** the hair and increases **shine**
- ✓ Promotes **rehydration of the scalp**

FORMULATED FOR HAIR

SUITABLE FOR SHOWER
OR ASSISTED CLEANSING

BM 3966	A903665230	1000 ML

Professional skincare products for incontinent & disabled patients

The daily challenge for healthcare professionals working in hospitals, nursing homes and home care facilities is to maintain the healthy skin of patients with incontinence. Incontinence is a widespread phenomenon: about 50% of nursing home residents suffer from urinary incontinence, while faecal incontinence has been reported in 23-66% of cases. Fecal and urinary incontinence (double incontinence) occurs most in patients in need of long-term care.

Chronic or acute exposure to urine and/or faecal material can cause contact dermatitis (reactive skin response characterized by inflammation and/or erythema with or without erosion).

The consistent use of Bioderm® PASTA BARRIERA TRASPIRANTE with 10% zinc oxide, together with a frequent change of diaper, is a proven effective method to reduce and prevent the onset of dermatological problems. Bioderm® PASTA BARRIERA TRASPIRANTE forms a protective barrier on the skin against all agents that could irritate the skin, and this without affecting the skin's natural perspiration.

PASTA BARRIERA TRASPIRANTE

With 10% Zinc Oxide

With high protective power and emollient, soothing, rehydrating, revitalizing activity.

Applied daily:

- ✓ Protects the skin against irritation and complications
- ✓ Promotes the rebalancing of the skin's natural defenses
- ✓ Restores the physiological pH and hydrolipidic content of the skin.
